What this portfolio demonstrates

Excel dashboards for retail sales performance and customer segmentation

Power BI reporting for healthcare, gym retention and sales analytics

SQL and Power BI case study for grocery sales and operations

Focus on turning business questions into decisions, recommendations and action plans

Business areas covered

Retail sales optimisation

Healthcare performance management

Fitness retention and churn analysis

Regulated consumer product analytics

Grocery operations and inventory planning

My Analytical Approach

A repeatable approach for solving business problems with data.

**Understand
the problem**

**Prepare
and model data**

**Create KPIs
and measures**

**Build dashboards
and interpret trends**

**Recommend
actions**

I focus on the business question first, then use the right tool to produce clear evidence.
Each project connects KPIs and visuals to decisions such as inventory, staffing, retention, marketing or compliance.

Project Overview Matrix

Five portfolio projects showing practical analysis across different sectors.

BikeGear	Retail	Excel	Sales, products, regions	Dashboard + case study
E-Cigarette	Regulated sales	Power BI	Sales mix + compliance risk	Executive insights
WealthHospital	Healthcare	Power BI	Admissions, outcomes, revenue	Management report
Gym Retention	Fitness	Power BI	Churn, visits, retention	Retention strategy
Instacart	Grocery ops	SQL + Power BI	Orders, aisles, products	Operational case study

BikeGear Solutions | Retail Sales Optimisation

Excel case study across Canada, United States and Australia.

£95.0M

Total Revenue

£42.1M

Total Profit

1.35M

Total Orders

£70.55

Avg. Order Value

Business problem and approach

Leadership needed visibility into regions, states, age groups, products and demand cycles.

Dashboard used PivotTables, PivotCharts, formulas, slicers and KPI tiles.

Profit margin was approximately 44%, giving room for targeted promotions without weakening profitability.

Revenue distribution by market

Customer demographic strength

BikeGear Insights and Recommendations

From retail dashboard insights to commercial action.

Key insights

United States dominated revenue, with Australia as a strong second market and Canada underperforming.

Adults over 35 generated the strongest sales contribution, while the gender split was balanced.

Bike racks, helmets and tyres were the strongest product groups.

Sales followed clear seasonality, with demand rising around spring and peak windows.

Recommended actions

Concentrate paid media on top US states and key Australian metros.

Run an awareness campaign in under-performing Canadian provinces.

Protect price on hero SKUs and bundle slow-moving items with best-sellers.

Pre-position inventory before peak months and align promotions to demand cycles.

Customer Gender Split

E-Cigarette Sales Analytics | Commercial and Compliance Insight

Power BI dashboard interpretation focused on growth, product planning and regulatory risk.

64%

Prefilled Cartridge Sales

36%

Disposable Sales

Top 4

CA, TX, FL, NY markets

A-tier

Vuse & JUUL

Key findings

Sales were concentrated in California, Texas, Florida and New York.

Vuse and JUUL led brand performance, with NJOY and Geek Bar in the next tier.

Menthol and tobacco dominated flavour demand.

Authorised products generated most sales, while pending products carried future revenue risk.

Priority state markets

E-Cigarette Strategic Actions

Balancing growth with regulatory awareness.

30 Days

Implementation step

Validate metrics, confirm sales definitions and create an FDA PMTA risk summary.

60 Days

Implementation step

Introduce product-type forecasting and classify brands into A, B and C tiers.

90 Days

Implementation step

Launch targeted activity in leading states and produce a monthly sales/compliance pack.

Management focus

Prioritise high-performing states for campaigns, retailer support and stock availability.

Protect leading brands while developing second-tier growth brands to reduce concentration risk.

Make authorised products the default growth priority and review exposure to pending products every month.

Gym Membership Retention Analytics | Revenue and Churn

Power BI insights for revenue, engagement and member retention.

West

Highest Revenue Region

North

Highest Avg. Visits

Youth Adults

Lowest Avg. Visits

Churn Risk

Low-Visit Members

Key findings

West generated the highest revenue and should be protected with strong retention management.

North had the highest average visits, making it a useful engagement benchmark.

Youth Adults recorded lower average visits and need targeted nudges.

Inactive and withdrawn members represent future revenue leakage.

Gym Retention Recommendations

Turning member behaviour data into retention action.

Action priorities

Create a churn watchlist using falling visits, inactive status and low attendance.

Protect high-value members through loyalty touchpoints, service checks and renewal support.

Compare West, North and lower-performing regions to identify practices that can be copied.

Plan campaigns, staffing and classes around seasonal attendance peaks and dips.

Clean N/A and invalid profile data to improve segmentation quality.

30-60-90 day plan

30 Days: clean member records, define churn triggers and produce at-risk lists.

60 Days: pilot reactivation campaigns for low-visit members and support for high-value members.

90 Days: refresh dashboards weekly, measure retention lift and shift campaign spend toward seasonal demand.

WealthHospital Analytics | Healthcare Performance Dashboard

Power BI insights for revenue, admissions, outcomes and diagnosis demand.

84.54%

Discharged Outcomes

2.5K

Outpatient Visits

Jun/Nov

Revenue Peaks

Feb/Jul

Revenue Dips

Management insight

Revenue was not flat, with clear peak and dip months.

Outpatient visits were the largest admission category, followed by inpatient and emergency.

Most patient outcomes were discharged, but admitted, transferred and deceased outcomes still need review.

Admissions by visit type

Outcome status mix

WealthHospital Insights and Actions

Using hospital dashboards for planning, quality and patient flow.

Key insights

Digestive system conditions appeared to create the highest admissions, followed by infectious/parasitic and cardiovascular conditions.

Outpatient pressure can affect waiting times and patient experience if capacity is not planned properly.

Monthly revenue variance should inform budget, staffing and cash-flow planning.

Recommended actions

Strengthen monthly forecasting and create a variance tracker.

Optimise outpatient appointment flow, triage and clinic scheduling.

Investigate admitted, transferred and deceased outcomes for bottlenecks.

Align staffing, equipment and pathways to diagnosis demand.

Instacart Sales and Operations | SQL and Power BI Case Study

A business analytics project focused on sales, products, customers and operations.

158M+

Dashboards

Business questions addressed

Identify top departments by revenue and products most sold during weekends.

Analyse aisles generating the highest revenue and profit.

Find best-selling, worst-selling and unsold products.

Understand busiest order times and sales trends over time.

Compare bread and alcoholic product profitability through SQL analysis.

Portfolio output

Dashboard 1: Executive Overview

Dashboard 2: Product and Department Analysis

Dashboard 3: Customer Behaviour Analysis

SQL findings and operational recommendations

Instacart Key Findings

Performance, product and customer behaviour insights.

Product and department insights

Personal Care and Snacks generated significant revenue contributions.

Personal Care was the highest profit-generating department.

Vitamins & Supplements was the highest revenue-generating aisle.

Product performance was concentrated among a relatively small number of products.

Customer behaviour insights

Order activity peaked during daytime hours, supporting workforce scheduling decisions.

Sunday was the busiest shopping day.

Weekend orders accounted for the majority of transactions.

Monthly sales fluctuated, showing seasonal demand patterns.

Instacart Recommendations

Operational improvements linked to dashboard and SQL findings.

Inventory

Increase allocation before weekends and prioritise high-demand products.

Aisles

Expand Vitamins & Supplements assortment and negotiate supplier discounts.

Marketing

Promote top weekend products and bundle complementary items.

Products

Review pricing, promotions or discontinuation for underperforming products.

Workforce

Schedule more staff during peak daytime order periods.

Profit

Protect Personal Care through stock availability and premium offers.

Cross-Project Skills Demonstrated

The core capabilities shown across the portfolio.

Business Analysis

- Problem framing
- Business questions
- Stakeholder-focused recommendations
- 30-60-90 action planning

Data Analytics

- KPI development
- Trend analysis
- Segmentation
- Product and customer behaviour analysis

Tools

- Excel dashboards
- Power BI reporting
- SQL querying
- Dashboard storytelling

Across all projects, the focus is consistent: turn raw data into clear decisions that improve revenue, operations, customer retention, staffing and risk management.

Selected Achievements and Portfolio Value

A practical portfolio aimed at business analyst and data analyst roles.

£95.0M

Retail revenue analysed

84.54%

Hospital discharge outcome

1M+

Action roadmaps

Why this portfolio is valuable

Built dashboards and executive presentations that translate analysis into decisions.

Used measurable KPIs including revenue, profit, order volume, retention, admissions, outcomes and product mix.

Connected insights to inventory, staffing, marketing, compliance and customer retention actions.

Demonstrated adaptability across commercial, healthcare and operational datasets.
